Video data encoded from encoder
11
Dividing into packet
12
Video packet
13
14
15
16
Calculating the estimated distortion value
Measuring the number of wireless channels through which packets are delivered
Target BER depending on service type
Determining the target BER of each packet
17
18
19
Transmitting each packet with its determined target BER being satisfied by performing the FEC/CDMA power control
Transmitting the information by which the target BERs of packets can be calculated on the dedicated control channel or a header or tailer of a former packet after saving the information

FIG. 1
